

What is GitHub? Explain the basic features of GitHub in your own words

GitHub is a platform for managing and sharing code. Here are its basic features:

Repositories: Place your code records deep right into project folders.

Version Control: Track changes and modifications made to your code an essential for every coder.

Contributing: Write code together by sugesstion and reviewing changes.

This is used to report bugs or tasks.

Documentation: add project details and guides inside your repo.
