

What are the steps to install Angular CLI on your local machine?

1. Install Node.js
2. in Terminal type `node -v` and `npm -v` to check version
3. Run: `npm install -g @angular/cli`
It will install on system globally of latest version of angular
4. Check installation: `ng version`

How do you run an Angular application, and what happens when you execute the `ng serve` command?

1. Go to your project folder in the terminal
2. Run: `ng serve`
3. It compiles the app and starts a development server
4. The app opens at <http://localhost:4200/>
5. It watches for file changes and reloads the app automatically
