

1. title tag

The **<title>** tag defines the title of the document. The title must be text only and it is shown in the browsers title bar on the pages tab.

The title tag is crucial for SEO, as it helps search engines understand the content of the page and display it in search results.

2. Link Tag

The link tag is used to link external resources, such as CSS stylesheets, favicons, and other files, to the web page

The link tag can be used to define the relationship between the current page and the linked resource, such as "stylesheet" or "icon".

3. Style Tag

Style tag can be used in three different ways inline,Embedded(Internal),External.

1.inline style:

Styles can be applied directly to html elements using the style attribute.

2.Embedded style:

The Style tag is use to define styles that apply to the entire web page.

3.External Style

Styles can be defined in a separate css file and linked to the web page using link tag.
