What is the purpose of the src/app folder in an Angular project?

It contains the main application code like components, services, and modules — basically everything that makes up your Angular app.

What is the role of main.ts in an Angular application?

It's the entry point of the app. It bootstraps the root module (AppModule) and starts the Angular application.

Explain the purpose of the app.module.ts file in an Angular application.

It's the root module that defines and connects components, services, and other modules. Angular uses it to know how to start the app.

But its not in latest version of the angular projects instead of this there are new two files generate

1. App.config.ts
2. App.routes.ts

What is the role of package.json and package-lock.json in Angular Application

package.json: Lists app dependencies and scripts.

package-lock.json: Locks the exact versions of installed packages to ensure consistency across setups.
